

# Attacking Your Executive's Lack of Home (or Personal) Cybersecurity

A national survey of over 550 cybersecurity executives by the Ponemon Institute reveals that while Digital Executive Protection is a top-of-mind concern, most organizations are either not equipped or have not allocated the resources to manage the ramifications of a cyber attack on an executive's personal digital life.

Below are the four major findings from the report.

62%

62% of organizations **don't have a team** to address cyber attacks on executives' personal devices.

80%

Yet, 80% believe that a future risk of **cyber attack on these executives** and key leaders is more than likely.

26%

Only 26% of those surveyed are highly confident that their executives would know how to **protect their personal computer from viruses**.

49%

Less than half are highly confident that executives would know how to **secure their personal email**.

This is just a quick snapshot of the results we found in our primary research study. To receive the full report upon publication, [register to be on our waitlist](#).
